                                                                                                                                                                                                                                                              The sequence is encoded by the composite cDNA of AAN90327. These antigens react with antibodies in patients with non-A non-B hepatitis (NANBH). They can be used to diagnose HCV-induced NANBH, to raise antibodies for immunoasasy or treatment, or to produce vaccines. (Updated on 25-MAR-2003 to correct PR field.)

```
It is the sequence encoded in the open reading frame of hepatitis C virus (HCV) cDMA inserts in clones K9-1 through 15s. It is antiqunic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, (Updated on 25-MAR-2003 to correct PR field.)
(Updated on 25-WAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        It is the sequence encoded in the open reading frame of hepatitis C virus (MCV) cDNA inserts in clones 12f through 15e. It is antigenic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A,

genome polyprotein - hepatitis C virus (strain Taiwan)
N;Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98) (nonstruu protein NS4s; nonstructural protein NS5 c; Species: hepatitis C virus
A;Note: hepatitis C virus
A;Note: hepatitis C virus
C;Date: hepatitis C virus
A;Note: hepatitis C virus
A;Note: hepatitis C virus
C;Date: A virus
C;Date: J12c-1992 #sequence_revision 31-Dec-1992 #text_change 19-Jan-2001
C;Accession: A40244

A Residues: 2650-2707 (ARA)

A Reperfamily: a cleavage sites of this polyprotein have not been determined.

C Comment: The cleavage sites of this polyprotein

C Superfamily: hepatitis C virus genome polyprotein

F 2-115/Product: capsid protein & *status predicted (ARE)

F 116-191/Product: envelope protein & *status predicted (ARE)

F 130-1006/Product: nonstructural protein NSI *status predicted (NSI)

F 130-1006/Product: nonstructural protein NSI *status predicted (NSI)

F 1230-1237/Region: nucleotide-binding motif & (P-loop)

F 1312-1317/Region: nucleotide-binding motif B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                R;Kato, N.; Hijikata, M.; Ootsuyama, Y.; Nakagawa, M.; Ohkoshi, S.; Suglmura, T.; Sh

Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.99-); Protease/helicase NS3 (P70) (Hepacivitin)
(EC 3.4.99-); Protease/helicase NS3 (P70) (Hepacivitin)
NS48 (P27); Nonstructural protein NS5A (P4); Nonstructural protein
NS5B (P65) (P70) (RMA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate H) (HCV).
Viruses; SSRNA positive-strand viruses, no DNA stage; Flavivridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      X-RAY CRYSTALLOGRAPHY (2.1 ANGSTROMS) OF 1207-1657.

"I FUNCTION: THE SMALL PROFIEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

"S3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

"C ATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in Pl and Ser or Ala in Pl'.

"C ATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate + (RNA)(N).

"I POPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN G AND MRNA.

"IPOPROTEIN C AND MRNA.

"SHILARITY: THE PROTESE BELOWGS TO PEPTIDASE FAMILY S29.

Virus Res. 23:39-53(1992).

C -- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMERANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C -- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in Pl and Ser or Ala in Pl'.

C -- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                     01-APR-1993 (Rel. 25, Created)

Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NAS); Protean P7: Nonstructural protein NS2 (RP2);
(EC 3.4.22.-); Protease/hellcase NS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NS54 (P4); Nonstructural protein NS58 (P65) (P70) (NNA-directed RNA polymerase) (EC 2.7.7.48)].
NS58 (P65) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate HC-J6) (HCV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                [RNA](N).
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE CONSIGTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

-1- SUBMNIT: THE VIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLECCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VITOLOGY 188:331-341(1992).

-1- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

                                                                                                                                                                                                                                                                                     STRAIN-CV. Columbia:
Kieselbach T., Bystedt M., Schroeder W.P.;
Kleselbach T., Bystedt M., Schroeder W.P.;
Submitted (JUL-2000) to the SWISS-PROT data bank.
-!- FUNCTION: SERINE PROTEASE THAT IS REQUIRED AT HIGH TEMPERATURE.
--- HAY BE INVOLVED IN THE DEGRADATION OF DAMAGED PROTEINS. IN VIVO,
CAN DEGRADE BETA-CASEIN.
--- ENZYME REGULATION: INHIBITED BY PHENYLMETHYLSULFONYL, FLUORIDE AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
